

Python Tip: Hardware-Agnostic

```
pip freeze
```

Working with PyTorch? Avoid hardware-specific dependencies like NVIDIA CUDA from your `requirements.txt`. Here's a one-liner to make it hardware-agnostic.

The Problem

We often use `pip freeze` to generate a `requirements.txt` file, but it includes all installed packages, including hardware-specific ones like NVIDIA CUDA libraries.

This can cause compatibility issues for users without the same hardware setup.

```
pip freeze > requirements.txt
```

The Solution

Use this command to generate a `requirements.txt` that includes PyTorch but excludes hardware-dependent packages:

```
pip list --not-required --format=freeze > requirements.txt
```

Wrap-Up

Now you can share your requirements without worrying about hardware compatibility issues.
